

Seedling Activity

Select a seedling and write your name on the container with a Sharpie.

Each afternoon when you arrive at the lab, take a few moments to do the following:

1. Locate your seedling
2. Measure and record its height in mm
3. Photograph it if you have a cell phone camera
4. Describe anything that has changed since the day before or anything else noteworthy
5. Water the seedling if the soil is dry

Seedling data sheet

Day	Height (mm)	Change in height (mm)	Notes
1			
2			
3			
4			
5			

After you record your last measurement on Friday, graph the results, placing time on the X-axis. Don't forget to label the graph and its axes.
